Campus Updates

- A fully vaccinated and boosted support staff member tested positive for COVID-19 today. Staff who may have been exposed to this staff member have been contacted and are all being tested.

We continue to educate and screen staff members. Yet as a reminder, if you have ANY cold symptoms, even just the sniffles, please delay visiting your loved one at Luther Manor. Many people report feeling like they had a cold and then test positive several days later, even after multiple negative test results. Also, with the shorter quarantine times that the CDC issued, remember that you are still infected after 5 days so PLEASE delay visiting your loved one until after two weeks from when you first tested positive for COVID.

The risk of contracting COVID is very real and we are seeing more vaccinated people become infected. Being vaccinated helps reduce symptoms if you become infected and helps prevent serious illness and hospitalization. To increase your protection, the CDC is now **advising everyone over the age of 18 to get a booster shot.** Booster shots are available at local CVS and Walgreens pharmacies, at many urgent care clinics and at your doctor's office. Please consider giving yourself and others the added benefit of protection from the booster shot. If you are apprehensive for yourself or your loved one, please speak with your doctor.
