Campus Updates

- Two residents in the Health Care Center Rehab unit have tested positive for COVID. In addition, one staff member in Rehab and one dining staff member tested positive.

  Staff who may have been exposed to these individuals have been contacted and are all being tested.

  All residents who had direct contact with these individuals are being tested and families were notified. Fully vaccinated residents who test negative do not need to be placed into isolation. Residents who are not fully vaccinated, will be placed in droplet/contact precautions for a minimum of 7 days. **Residents with direct contact will be retested in 5 to 7 days.**

  The risk of contracting COVID is very real and we are seeing more vaccinated people become infected. Being vaccinated helps reduce symptoms if you become infected and helps prevent serious illness and hospitalization. Being vaccinated also helps reduce the spread of COVID. To increase your protection, the CDC is now **advising everyone over the age of 18 to get a booster shot**. Booster shots are available at local CVS and Walgreens pharmacies, at many urgent care clinics and at your doctors office. **Please consider giving yourself and others the added benefit of protection from the booster shot. If you are apprehensive for yourself or your loved one, please speak with your doctor.**

  We hope you all had a wonderful Christmas!
